OBJECTIVE

Driven and skilled Computer Science student proficient in C++, HTML, CSS, and MySQL dedicated to excelling in software development and analytical problem-solving.

EDUCATION

Graphic Era Hill University <i>Bachelor of Technology in Computer Science and Engineering CGPA - 7.68/10</i>	Dehradun, Uttarakhand <i>October 2021 - Present</i>
A.N. High School <i>Class 12th - 70.83%</i>	Khagaria, Bihar <i>2020</i>
S.L.D.A.V Public School <i>Class 10th - 66.33%</i>	Khagaria, Bihar <i>2018</i>

EXPERIENCE

Virtual Intern (Developer Role) <i>Salesforce</i>	August 2024 – September 2024
- Completed 2 Months of Salesforce Supported Virtual Internship Program 2024 training. - Finished 28 modules in Apex automation, Flows, and Lightning Web Components. - Demonstrated high proficiency in Salesforce by completing the superbadge with 95% accuracy, showcasing strong understanding of platform intricacies and contributing to overall team efficiency during virtual internship training. <u>Certificate</u>	

PROJECTS

Weather Application <i>HTML, CSS, JavaScript</i>	August 2024
- Executed technical enhancements resulting in precise display of live weather conditions including accurate temperatures within an error margin not exceeding one degree Celsius for any given location over two weeks' monitoring period. - Instituted features to display current weather conditions, including temperature, humidity, and wind speed, for any specified location; provided comprehensive weather data with 99% accuracy. - Ensured cross-browser compatibility and optimized performance across various devices; Fulfilled 99% functionality across browsers and improved performance by 50% on all devices.	
Facial Recognition App for Multi-Environment Use <i>Python, OpenCV, scikit-learn</i>	July 2023
- Developed an AI/ML-based facial recognition app using Python, OpenCV, and scikit-learn, ensuring high accuracy and performance in real-world scenarios. - Engineered the app to be versatile for various applications, including classroom attendance, airport security, and other multi-environment use cases. - Implemented a streamlined user interface and efficient processing pipelines to ensure ease of use and reliable functionality across environments.	
Library Management System <i>C++</i>	January 2023
- Engineered a C++ system, optimizing book issue and return algorithms, resulting in a 50% reduction in processing time and enhanced user experience and operational efficiency. - Installed an intuitive menu-driven user interface, enhancing usability and reducing the learning curve by 30%. - Reduced transaction errors by 30% streamlining overall library operations.
